IV. Trouble shooting	130
1. General issues.....	130
1.1. Some of the theme features don't work or give errors.	130
1.2. Blank page or 404 not found – when trying to open theme admin pages.....	130
1.3. There is no theme admin tab in the admin panel, or I get a blank page, or Access Denied error.	
131	
1.4. Theme was installed but Magento doesn't see the theme files	131
1.5. "Package with this name does not exist" message when trying to enable the theme.....	131
1.6. Tabs, sliders or other interactive elements don't work.....	131
1.7. After theme installation the store gives blank page or an error.....	131
1.8. Images (e.g. in the slideshow) are not displayed.	131
1.9. Sliders: previous/next buttons don't work in some browsers.	132
1.10. Slideshow is not displayed on the home page.....	132
2. Configuration.....	132
3. Third-party extensions	133
3.1. One of my extensions doesn't work with this theme.	133
3.2. One of the features stopped working after third-party extension was installed.	133

Ma_carstore is a Magento theme with advanced admin module, extremely customizable and fully responsive. It is suitable for every type of store. It is a standalone **design package** (not a sub-theme of Magento “default” theme) so you can easily create your own sub-themes.

More info

And here you can find out more about theme updates, new features and about our upcoming themes:

1.2. Support policy

This user guide was created to help you quickly configure our theme. Please read it carefully, it will help you to eliminate most of potential problems with incorrect configuration.

Important:

Please note that as authors of this theme we are able to provide support only for the features which we created and for the issues related strictly to this theme. We do not provide support for Magento configuration, installation, maintenance, customization etc.

- Theme support**

If you have found any bugs or have some other problems with this theme. If the problem is not covered there, you can contact us in the comment section on [Plazathemes](#) or via contact form on our profile page on [Plazathemes](#). We will respond as soon as possible (within 24 – 48 hours, usually much faster).

- Questions about Magento:**

Elements such as *category management, product management, checkout process, payment methods* and many others are default Magneto functionalities and are beyond the scope of our support. How to get Magento support:

1. If you have a question about Magento itself, please ask on [Magento Forum](#). Almost every detail of Magento configuration is described there so you will find answers for most of your questions. You can also find there many helpful tips and tutorials.
2. The best place to start searching is chapter **4. Magento**

configuration in this user guide. It covers some of the basic Magento elements.

3. If you're looking for a different topic, it might be covered in the *online Magento guide*. You can find there all the basic Magento configuration details and other information.
4. You might also want to check other sites referenced in **1.1.2 Magento help** such as **Magento Go Knowledge Base** or **Magento Go Video Tutorials**.

- **Theme customization support**

Customization/modification of Magento themes is a very large subject and in some cases can be very complex. Due to that we're unable to provide help or support related to the theme customization.

1.3. Third – party extensions

This theme may not be compatible with some third-party extensions. It's impossible for theme authors to make the theme compatible by default with all existing extensions because there are thousands of available Magento extensions. Only the “default” Magento theme (located in *app/design/frontend/default/default*) is compatible with all third-party extensions, because all extensions are designed to work with the “default” theme.

Generally all extensions can work with all themes but sometimes they have to be integrated manually. That's because sometimes the extension and the theme override the same Magento template file so there can be a conflict.

- **Support**

Author of the extension should provide detailed instruction about how to integrate the extension with any custom theme.

- **How to install**

To work with this theme, the extension should be installed in the theme's directories instead of the “default” Magento theme directories. To be more specific: extension should be installed in the main

directories of the default theme in the **ma_carstore design package**. Here are the main directories of **ma_carstore**:

- Template files:
app/design/frontend/default/ma_carstore
- Skin files:
skin/frontend/default/ma_carstore

where **ma_carstore** is the name of the design package, and default is the name of the default theme in the package.

In many cases you only need to upload the extension to the theme's directories. Sometimes you need to edit layout files to "tell" the theme where it should display extension's output. If you are not familiar with Magento, you should ask the author of the extension for more information. If you feel that you might have troubles with installing extensions, we advise that you order professional installation services (unfortunately we don't offer this type of services).

2. Quick start

2.1. Important things you need to know before you start using Magento

- ❖ When developing your store, you should completely **disable Magento cache**. Enable it after you finish configuring your store
- ❖ After making changes to your store such as editing products, adding categories etc. You need to reindex the data.

2.2. Configuration

Next, you need to configure your store. This theme works "out of the box", but not all of the features are enabled by default. You might want to take the following steps:

Note:

*You may find these Magento documentation and tutorials useful while configuring your store: **1.1. References**.*

1. Disable Magento cache before you start configuring your

store

2. Upload your logo.
3. Configure your home page
4. Configure position of the options box on product page if your products have options

2.3. Fresh Magento installation

If you have just installed a fresh copy of Magento you should also:

1. Create some categories.
2. Add some products.
3. Re-index the data after creating categories and products

2.4. Theme customization

For more information about theme customization

2.5. Demo products

To install demo products and categories you can use the sample data from the official.

Magento site (it must be installed prior to the basic Magento installation):

- <http://www.magentocommerce.com/knowledge-base/entry/installing-sample-data-archive-for-magento-1610>
- <http://www.magentocommerce.com/download>
-

3. Installation

To install the theme you only need to upload all the theme files to your server and then enable and activate the theme in the admin panel. But to avoid unexpected problems after installation, you should first prepare your Magento. Please strictly follow the steps described in this guide.

3.1. Prepare your Magento

1. It is recommended to install the theme on a test server before you install it in a live store.
2. **Backup Magento** files and the store database.

Important:

Creating backup before installation of any themes or

extensions in Magento is extremely important, especially when you are working on a live store.

3. Disable compilation mode in System > Tools > Compilation.

4. Disable:

- Magento cache (refer to **4.1.2 Disable cache** for details)
- Full page cache and caching modules for Magento (such as Speedster)
- Any additional cache on your server, PHP cache engines, APC, etc.

Important:

When developing your Magento store, in order to be able to see changes immediately, you should completely disable the cache. You can enable it after you finish configuring your store.

5. **Remove** all possible custom modifications of the Magento's "base" theme. **ma_carstore** (same as any Magento theme) relies on "base" theme, so any modifications of the "base" theme can change the default behavior of **ma_carstore** and break some functionality. **You should never edit "base" theme's files.**
6. Log out from Magento admin panel. Do not just close the browser window: you need to click **Log Out** link to refresh the access control system.

3.2 Install

Before you install the theme **you need to prepare your Magento**, so please do not omit the previous step: **3.1 Prepare your Magento**.

3.2.1. Quickstart package

You install new website with database sample. After you install your website like our demo

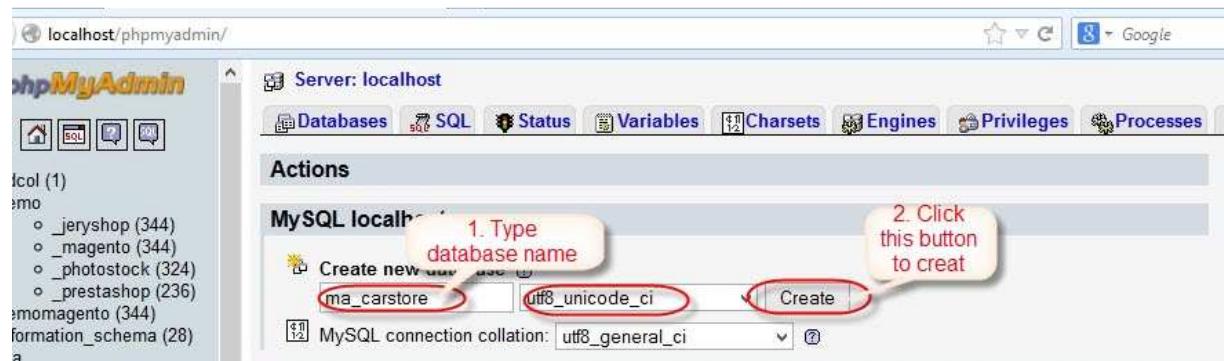

Quickstart package = Latest Magento version + Full Extensions + Sample database same like live demo site

Setup Instructions:

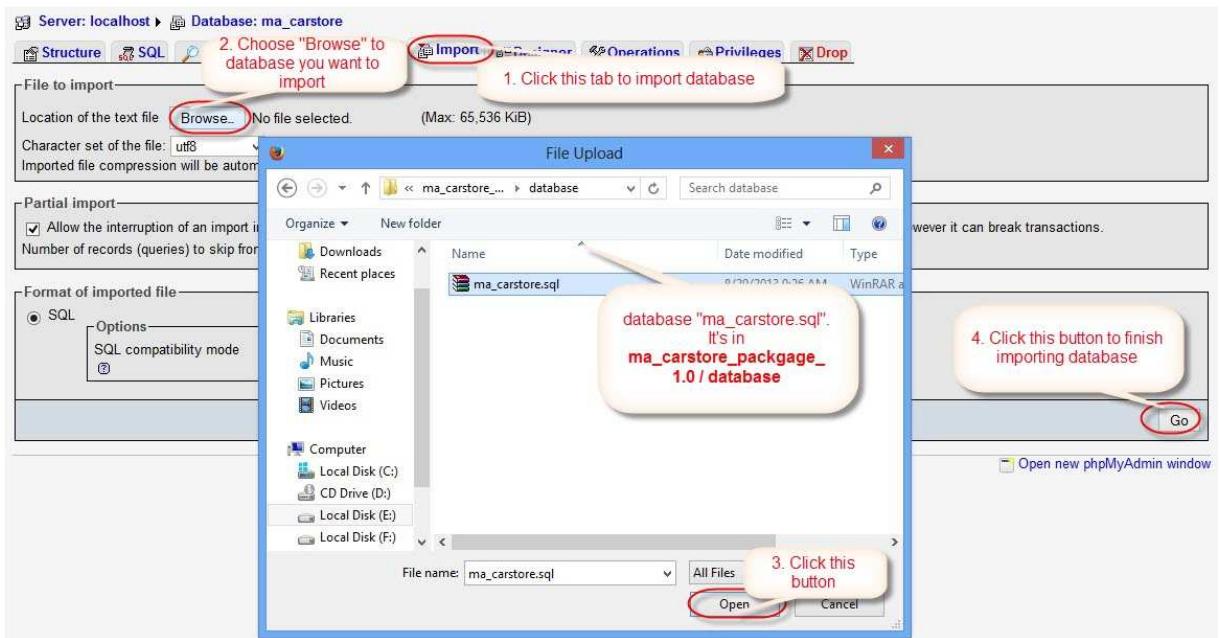

3.2.1.1. With magento 1.6.x.x, 1.7.x.x

1. Create new database and import database sample (**ma_carstore.sql** or **ma_carstore.sql.gz**) in database folder.

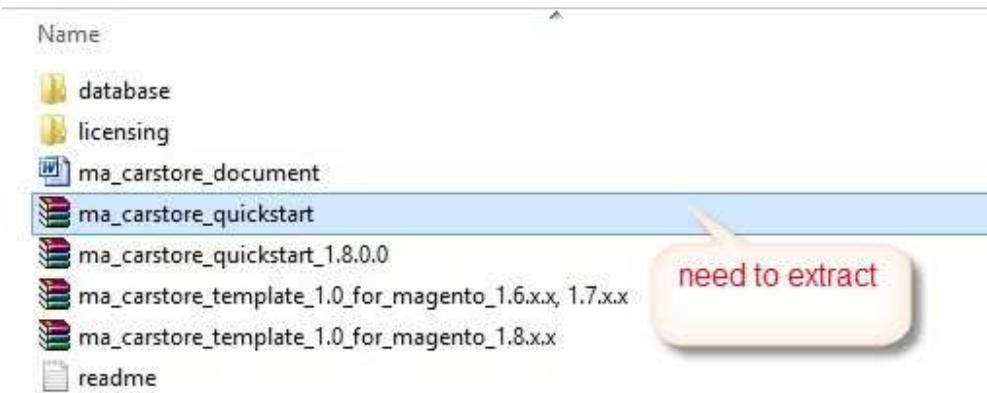

- Open your Browse and type : localhost/phpmyadmin
- Then create database

- Click database you have created

- Extract and Upload the whole Quickstart package (app, js, skin ... in **ma_carstore_quickstart** folder) to your server.

ma_carstore_quickstart is in **ma_carstore_package_1.0**.
ma_carstore_package_1.0 contain folders as above image
Extract **ma_carstore_quickstart**, we got:

Name
app
downloader
errors
includes
js
lib
media
pkginfo
shell
skin
var
.htaccess
.htaccess.sample
api.php
cron.php
cron.sh
 favicon
get.php
index.php
index.php.sample
install.php
 LICENSE
 LICENSE
 LICENSE_AFL
 mage
 php.ini.sample
 RELEASE_NOTES

Copy all of folder above to your Magento .

3. Open browser and navigate to your site (where the quickstart uploaded) to load default Magento installer with the database you just created and import database sample.

As an example, name of magento is **ma_carstore**.

Click button “Continue”.

4. Step by step to follow the instructions.

Click “Continue”. We got:

Installation

- Download
- License Agreement
- Localization
- Configuration**
- Create Admin Account

Go to Frontend **Go to Backend**

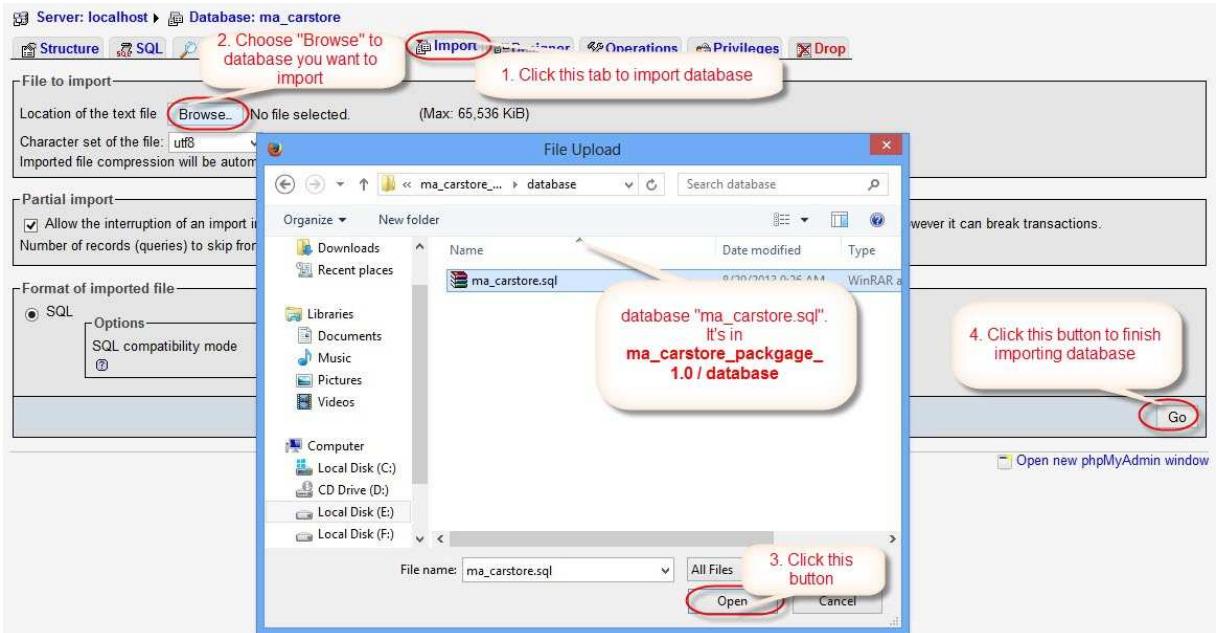

5. Finish installer.
6. You can “Go to frontend” to go to Home page.
(Important note (at step 3 of installation - Configuration page))

3.2.2. Install template

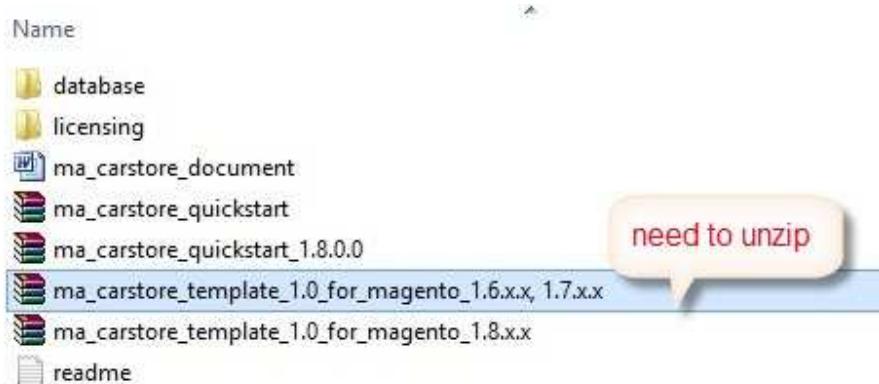

If you exist a magento website you can install only template.

You install new website with database sample. After you install your website like our demo

Below is introduction about set up each template.

3.2.2.1. With magento 1.6.x.x, 1.7.x.x

1. Please unzip package **ma_carstore_template_1.0_for_magento_1.6.x.x, 1.7.x.x.zip** and upload the folders (app, skin, js, media ...) from the theme package to the root directory (www, public_html) of your magento software using an FTP client.

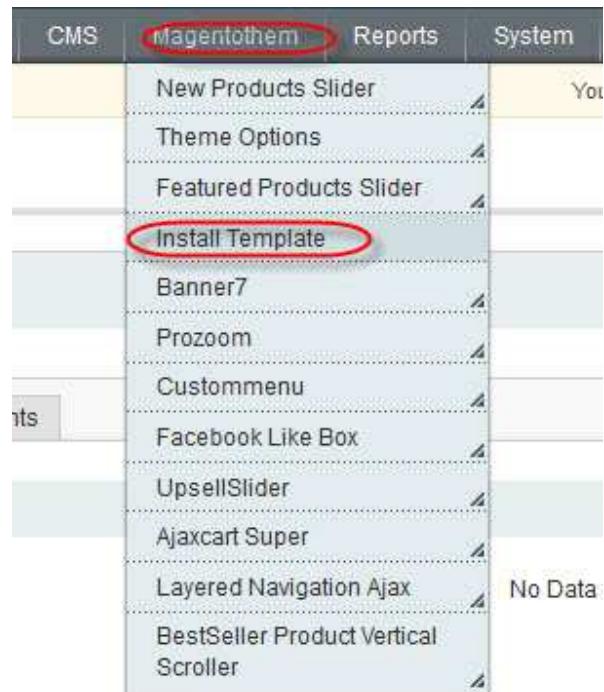

ma_carstore_template_1.0_for_magento_1.6.x.x, 1.7.x.x.zip in
ma_carstore_package_1.0

Unzip **ma_carstore_template_1.0_for_magento_1.6.x.x, 1.7.x.x.zip**, we got:

Copy all **app, js, media, skin** above to your Magento.

2. Please go to **Magento Admin > Magentothem > Install template**

3. Choose **Store View** -> then click **submit** button

A screenshot of the 'Setting Template' configuration page. At the top, a green success message says 'Template was successfully uninstalled'. Below it is a 'Setting' header. There are two dropdown menus: 'Store View*' which is set to 'All Store Views' (highlighted with a blue background), and 'Action' which is set to 'Install Template' (with a checked checkbox). In the bottom right corner, there are 'Reset' and 'Submit' buttons.

4. Clear all cache (**System > Cache management > Disabled all cache**)

Actions			
Cache Type	Description	Associated Tags	Status
<input checked="" type="checkbox"/> Configuration	System(config.xml, local.xml) and modules configuration files(config.xml).	CONFIG	ENABLED
<input checked="" type="checkbox"/> Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	ENABLED
<input checked="" type="checkbox"/> Blocks HTML output	Page blocks HTML.	BLOCK_HTML	ENABLED
<input checked="" type="checkbox"/> Translations	Translation files.	TRANSLATE	ENABLED
<input checked="" type="checkbox"/> Collections Data	Collection data files.	COLLECTION_DATA	ENABLED
<input checked="" type="checkbox"/> EAV types and attributes	Entity types declaration cache.	EAV	ENABLED
<input checked="" type="checkbox"/> Web Services Configuration	Web Services definition files (api.xml).	CONFIG_API	ENABLED

After cache is disabled cache management screen might look like this:

Actions			
Cache Type	Description	Associated Tags	Status
<input type="checkbox"/> Configuration	System(config.xml, local.xml) and modules configuration files(config.xml).	CONFIG	DISABLED
<input type="checkbox"/> Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	DISABLED
<input type="checkbox"/> Blocks HTML output	Page blocks HTML.	BLOCK_HTML	DISABLED
<input type="checkbox"/> Translations	Translation files.	TRANSLATE	DISABLED
<input type="checkbox"/> Collections Data	Collection data files.	COLLECTION_DATA	DISABLED
<input type="checkbox"/> EAV types and attributes	Entity types declaration cache.	EAV	DISABLED
<input type="checkbox"/> Web Services Configuration	Web Services definition files (api.xml).	CONFIG_API	DISABLED

3.2.2.2. With magento 1.8.0.0

1. Please unzip package

ma_carstore_template_1.0_for_magento_1.8.x.x.zip and upload the folders (app, skin, js, media ...) from the theme package to the root directory (www, public_html) of your magento software using an FTP client.

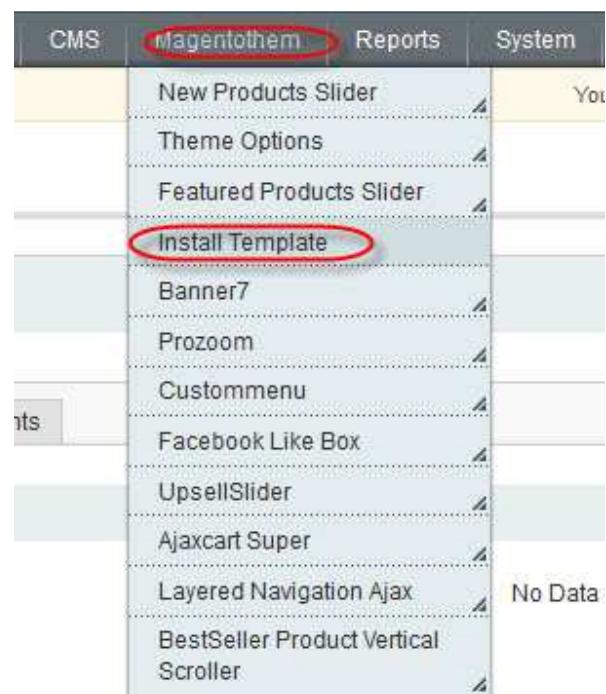

ma_carstore_template_1.0_for_magento_1.8.x.x.zip in
ma_carstore_package_1.0

Unzip **ma_carstore_template_1.0_for_magento_1.8.x.x.zip**, we got:

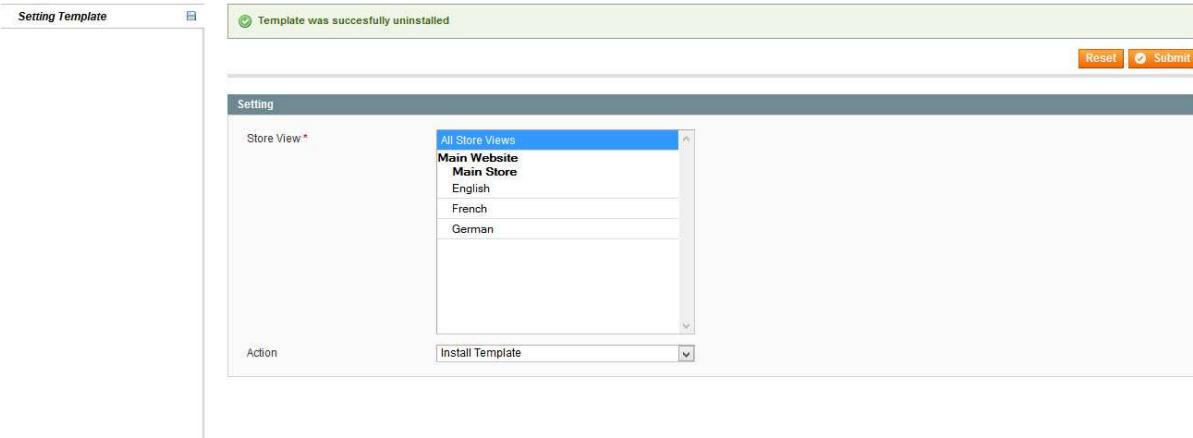

Copy all **app**, **js**, **media**, **skin** above to your Magento.

2. Please go to **Magento Admin > Magentothem > Install template**

3. Choose **Store View** -> then click **submit** button

4. Clear all cache (System > Cache management > Disabled all cache)

Cache Management			
	Description	Associated Tags	Status
<input checked="" type="checkbox"/>	Configuration System(config.xml, local.xml) and modules configuration files(config.xml).	CONFIG	ENABLED
<input checked="" type="checkbox"/>	Layouts Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	ENABLED
<input checked="" type="checkbox"/>	Blocks HTML output Page blocks HTML.	BLOCK_HTML	ENABLED
<input checked="" type="checkbox"/>	Translations Translation files.	TRANSLATE	ENABLED
<input checked="" type="checkbox"/>	Collections Data Collection data files.	COLLECTION_DATA	ENABLED
<input checked="" type="checkbox"/>	EAV types and attributes Entity types declaration cache.	EAV	ENABLED
<input checked="" type="checkbox"/>	Web Services Configuration Web Services definition files (api.xml).	CONFIG_API	ENABLED

After cache is disabled cache management screen might look like this:

Cache Management			
	Description	Associated Tags	Status
<input type="checkbox"/>	Configuration System(config.xml, local.xml) and modules configuration files(config.xml).	CONFIG	DISABLED
<input type="checkbox"/>	Layouts Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	DISABLED
<input type="checkbox"/>	Blocks HTML output Page blocks HTML.	BLOCK_HTML	DISABLED
<input type="checkbox"/>	Translations Translation files.	TRANSLATE	DISABLED
<input type="checkbox"/>	Collections Data Collection data files.	COLLECTION_DATA	DISABLED
<input type="checkbox"/>	EAV types and attributes Entity types declaration cache.	EAV	DISABLED
<input type="checkbox"/>	Web Services Configuration Web Services definition files (api.xml).	CONFIG_API	DISABLED

3.3 Problems after installation

If you encounter any problems after installation: flush Magento cache, log out from the admin panel, and log in again. Check again the installation steps and make sure you didn't omit any step. What can cause problems:

- a) Magento cache (or external cache) was not flushed after installation of the theme.
- b) Compilation mode was not disabled before installation.

- c) Some of the theme files were not uploaded.
- d) File permissions issue
- e) You have some third-party extensions which change/break theme's default behavior or cause some conflicts.
- f) You edited theme files and accidentally removed or changed something in the files.
- g) You have customized the theme by creating custom sub-theme and your modifications change/break the default behavior of the theme
- h) You have some elements that left from your previous theme (e.g. in Magento's "base" theme in **app/design/frontend/base/**) and that changes/breaks the default behavior of the theme.

Also check your log files in var/log/ (log settings should be enabled in the admin panel: **System > Configuration > Developer** for more information about possible errors.

4. Magento configuration

The following chapter describes some of the basic Magento settings and features. Please note that as authors of this theme we provide support only for the issues related strictly to the theme. Support for Magento configuration/ installation/ maintenance etc. is beyond the scope of our support. This chapter should be only treated as a starting point, more information about Magento can be found in Magento documentation : [1.1.2 Magento help](#)

4.1. Caching system

When developing your Magento store, you want to see the changes you have implemented. In order to be able to see changes immediately, you should completely **disable the cache**. You can enable it after you finish configuring your store.

If the cache is enabled, always **refresh the cache** after making changes in the store/theme/extension configuration.

To access the cache management screen, go to **System > Cache Management**.

4.1.1. Flush cache

Go to **System > Cache Management**. Click the following buttons to completely clear the store cache:

1. Flush Magento Cache
2. Flush Cache Storage
3. Flush Catalog Images Cache
4. Flush JavaScript/CSS Cache

The screenshot shows two parts of the Cache Management interface. The top part is 'Cache Storage Management' showing a grid of cache types with columns for Cache Type, Description, Associated Tags, and Status (all set to DISABLED). The bottom part is 'Additional Cache Management' with buttons for Flush Catalog Images Cache (Pregenerated product images files) and Flush JavaScript/CSS Cache (Themes JavaScript and CSS files combined to one file).

Cache Type	Description	Associated Tags	Status
Configuration	System(config.xml, local.xml) and modules configuration files(config.xml).	CONFIG	DISABLED
Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	DISABLED
Blocks HTML output	Page blocks HTML.	BLOCK_HTML	DISABLED
Translations	Translation files.	TRANSLATE	DISABLED
Collections Data	Collection data files.	COLLECTION_DATA	DISABLED
EAV types and attributes	Entity types declaration cache.	EAV	DISABLED
Web Services Configuration	Web Services definition files (api.xml).	CONFIG_API	DISABLED

4.1.2. Disable cache

Go to **System > Cache Management**. Click **Select All** link, select **Disable** in **Actions** field and click **Submit** button:

Actions			
Cache Type	Description	Associated Tags	Status
<input checked="" type="checkbox"/> Configuration	System(config.xml, local.xml) and modules configuration files(config.xml).	CONFIG	ENABLED
<input checked="" type="checkbox"/> Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	ENABLED
<input checked="" type="checkbox"/> Blocks HTML output	Page blocks HTML.	BLOCK_HTML	ENABLED
<input checked="" type="checkbox"/> Translations	Translation files.	TRANSLATE	ENABLED
<input checked="" type="checkbox"/> Collections Data	Collection data files.	COLLECTION_DATA	ENABLED
<input checked="" type="checkbox"/> EAV types and attributes	Entity types declaration cache.	EAV	ENABLED
<input checked="" type="checkbox"/> Web Services Configuration	Web Services definition files (api.xml).	CONFIG_API	ENABLED

After cache is disabled cache management screen might look like this:

Actions			
Cache Type	Description	Associated Tags	Status
<input type="checkbox"/> Configuration	System(config.xml, local.xml) and modules configuration files(config.xml).	CONFIG	DISABLED
<input type="checkbox"/> Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	DISABLED
<input type="checkbox"/> Blocks HTML output	Page blocks HTML.	BLOCK_HTML	DISABLED
<input type="checkbox"/> Translations	Translation files.	TRANSLATE	DISABLED
<input type="checkbox"/> Collections Data	Collection data files.	COLLECTION_DATA	DISABLED
<input type="checkbox"/> EAV types and attributes	Entity types declaration cache.	EAV	DISABLED
<input type="checkbox"/> Web Services Configuration	Web Services definition files (api.xml).	CONFIG_API	DISABLED

4.1.3. Enable cache

When the store is configured, you can enable caching system again. Go to **System > Cache Management**. Click **Select All** link, select **Enable** in **Actions** field and click **Submit** button:

Actions			
Cache Type	Description	Associated Tags	Status
<input checked="" type="checkbox"/> Configuration	System(config.xml, local.xml) and modules configuration files(config.xml).	CONFIG	DISABLED
<input checked="" type="checkbox"/> Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	DISABLED
<input checked="" type="checkbox"/> Blocks HTML output	Page blocks HTML.	BLOCK_HTML	DISABLED
<input checked="" type="checkbox"/> Translations	Translation files.	TRANSLATE	DISABLED
<input checked="" type="checkbox"/> Collections Data	Collection data files.	COLLECTION_DATA	DISABLED
<input checked="" type="checkbox"/> EAV types and attributes	Entity types declaration cache.	EAV	DISABLED
<input checked="" type="checkbox"/> Web Services Configuration	Web Services definition files (api.xml).	CONFIG_API	DISABLED

4.1.4. Refresh cache

If the cache is enabled, after each configuration change, extension installation, upgrade or uninstallation always refresh the cache. To do this, go to **System > Cache Management**. Click **Select All** link, select **Refresh** in **Actions** field and click **Submit** button:

Cache Type		Description	Associated Tags	Status
<input checked="" type="checkbox"/>	Configuration	System(config.xml, local.xml) and modules configuration files(config.xml).	CONFIG	ENABLED
<input checked="" type="checkbox"/>	Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	ENABLED
<input checked="" type="checkbox"/>	Blocks HTML output	Page blocks HTML.	BLOCK_HTML	DISABLED
<input checked="" type="checkbox"/>	Translations	Translation files.	TRANSLATE	ENABLED
<input checked="" type="checkbox"/>	Collections Data	Collection data files.	COLLECTION_DATA	DISABLED
<input checked="" type="checkbox"/>	EAV types and attributes	Entity types declaration cache.	EAV	ENABLED
<input checked="" type="checkbox"/>	Web Services Configuration	Web Services definition files (api.xml).	CONFIG_API	ENABLED

4.2. Index management

Magento indexes most of its data in order to access it faster. If you make changes to your store such as editing products, adding categories, changing urls, etc. you will need to reindex the data so that the changes can show up on your frontend.

To access the index management screen, go to **System > Index Management**. To rebuild your indexes, select all, select **Reindex Data** and click **Submit** button.

4.3. How to enable the theme

In Magento you can enable the theme on many levels. You can set one theme for the entire store, but you can also set different themes for different parts of the store (even for selected categories, products or CMS pages).

If you want all your store pages to look the same (to use the same theme), **your theme should only be enabled** in **System > Configuration > Design** (the same as it was described in the installation steps **3. Installation**). You need to remove all theme overrides from categories, products and CMS pages.

There are many places where a theme can be enabled. If you have just installed a fresh copy of Magento, those places will be empty. Otherwise, please take a look at these sections of the admin panel:

- *System > Design*

This section should be empty, delete all existing entries:

The screenshot shows a search interface for design changes. At the top, there are buttons for 'Add Design Change', 'Reset Filter', and 'Search'. Below that, there are filters for 'Store' (dropdown), 'Design' (dropdown), 'Date From' (calendar), and 'Date To' (calendar). A message at the bottom says 'No records found.'

- These fields should be left empty, do not select any theme here:
 - *Catalog > Manage Categories > [category] > Custom Design > Custom Design*
 - *Catalog > Manage Products > [product] > Design > Custom Design*
 - *CMS > Pages > [page] > Design > Custom Theme*

Leave --Please Select-- in these fields, like on the following screenshot:

Remember to **flush the cache** after you change design settings.

4.4. Logo

- Upload your logo to *skin/frontend/default/ma_carstore/images/*.
- By default Magento theme displays logo from the file named **logo.png**. If you uploaded file with different name or different file format (e.g. *.jpg* or *.png*)
- Login your Magento Admin
- go to **System > Configuration > Design > Header** section and in the **Logo Image Src** field specify a path to your logo image.

4.5. Categories

Note:

More info about categories in Magento can be found in :

<http://www.magentocommerce.com/knowledge-base/entry/tutorial-creating-and-managing-categories>

To create and edit categories in Magento, navigate to *Catalog > Manage Categories* section of the admin panel. After installation of Magento your category tree is almost empty, there is only the root category (named Default Category):

The root category is not displayed in the frontend of the store – **that's why your main menu is empty** just after installing Magento. You need to add some new top-level categories (also called subcategories because they are descendants of the root category).

Important:

All categories have to be descendants of the root category. Do

not add categories outside of the root category tree.

To add a new category, select the root category by clicking on it and click **Add Subcategory** button:

Fill in all the required fields. Especially set **Is Active** and **Include in Navigation Menu** fields to **Yes**, and click **Save Category**:

A screenshot of a 'New Subcategory' form. At the top right are 'Reset' and 'Save Category' buttons. Below is a tab bar with 'General Information' selected, followed by 'Display Settings', 'Custom Design', and 'Category Products'. The 'General Information' section contains fields for 'Name' (with a red box around it), 'Is Active' (set to 'Yes' with a red box around it), 'URL Key', 'Thumbnail Image' (with a 'Wybierz plik' button), 'Description', 'Image' (with a 'Wybierz plik' button), 'Page Title', 'Meta Keywords', 'Meta Description', and 'Include in Navigation Menu' (set to 'Yes' with a red box around it). A 'WYSIWYG Editor' button is also present.

This will create a new category (which will be displayed as a top-level category in the main menu on frontend):

The screenshot shows the 'Categories' section in the Magento Admin Panel. On the left, there's a tree view of categories: 'Default Category (0)' and 'Sample category name (0)'. An orange arrow points from the 'Sample category name (0)' node up towards the top right. The top right panel shows a success message: 'The category has been saved.' Below it is a form for 'Sample category name (ID: 3)'. The 'General Information' tab is selected. The 'Name' field contains 'Sample category name'. The 'Is Active' dropdown is set to 'Yes'. The 'URL Key' field contains 'sample-category-name'. A checked checkbox says 'Create Permanent Redirect for old URL'. The 'Thumbnail Image' field has a placeholder 'Wybierz plik' (Select file). The 'Description' field is empty. Below these are 'Image', 'Page Title', 'Meta Keywords', and 'Meta Description' fields, all with their respective placeholders. At the bottom, a 'Include in Navigation Menu' dropdown is set to 'Yes'.

Note that this new category has to be a **descendant of the root category** – it has to be one level lower than the root category:

The diagram compares two category structures. Both start with 'Default Category (0)' at the top level. The left structure, labeled 'correct', shows 'Fashion (0)' and 'Books (1)' as direct children of the root. The right structure, labeled 'not correct', shows 'Fashion (0)' and 'Books (1)' as direct children of the root, which is incorrect according to the rule.

If the category is not displayed in the frontend: **reindex the data** in *System > Index Management* and **flush Magento cache**.

4.5.1. Category info

For each category you can add some basic information which will be displayed on category page (above the products). Navigate to **Catalog > Manage Categories** and select a category:

- **Description** – category description. You can enter text or HTML.
- **Image** – main category image. After image is uploaded and saved, an icon of the existing image will appear to the left of the button, and a **Delete Image** checkbox will appear to the right.

4.5.2. Landing pages

You can show your customers a landing page instead of the standard product listing page when they select the category. You can do so by enabling static block on your category page. Navigate to **Catalog > Manage Categories**, select a category, open **Display Settings** tab and select appropriate value in the **Display Mode** field. In the **CMS Block** drop-down, select which block you would like to display on category page. The list will include all existing static blocks.

4.5.3. Depth of the menu

In the main menu you can limit number of displayed category levels. To do that, go to

System > Configuration > Catalog and specify the depth in **Maximal Depth** field.

For example, if you want to display only three levels of categories, enter 3 in **Maximal Depth** field and save the configuration. From now on, only three levels of categories will be displayed in the main menu.

4.5.4. Categories in Layered Navigation ("Shop By")

You can display categories in Magento's Layered Navigation block ("Shop by" block) at the top of the left sidebar in category view. To display selected category in the Layered Navigation, go to **Catalog > Manage Categories**, click selected category and set **Is Anchor** field (in **Display Settings** tab) to **Yes**:

The screenshot shows two panels side-by-side. On the left is the 'Categories' management screen, displaying a tree structure of categories under 'Root Catalog'. On the right is the 'Display Settings' tab for category ID 12, 'Cameras'. The 'Is Anchor' checkbox is highlighted with a red box. Other settings include 'Display Mode: Products only', 'CMS Block: Please select a static block ...', and 'Available Product Listing Sort By' dropdown with options like 'Best Value', 'Name', and 'Price'. Buttons at the top include 'Reset', 'Delete Category', 'Save Category', and 'Save and Continue Edit'.

From now on this category will be displayed in the Layered Navigation. If the category is not displayed in the frontend: **reindex the data in System > Index Management** and **refresh Magento cache**.

4.6. Products

4.6.1. Options box

For products which have options (like configurable products or bundle products) you can change position of the options box on product page. It can be displayed in the main column (next to the product images), or in the column below images. Select a product in **Catalog > Manage Products**, open **Design** tab and select position in **Display Product Options In** field:

The screenshot shows the 'Design' tab for a product named 'Samsung Ace (Cell Phones)'. The 'Display Product Options In' dropdown is highlighted with a red box and set to 'Product Info Column'. Other fields in the 'Design' tab include 'Custom Design' (dropdown), 'Active From' (date input), 'Active To' (date input), and 'Custom Layout Update' (text area). The left sidebar lists various product configuration tabs: General, Prices, Meta Information, Descriptions, Images, Cell Phone Attributes, Design, Recurring Profile, Gift Options, Inventory, Websites, Categories, Related Products, Up-sells, Cross-sells, Product Alerts, Product Reviews, Product Tags, Customers Tagged Product, and Custom Options.

4.6.2. “Only X left” indicator

There is a quantity indicator displayed on the product page. It shows the quantity of items left in stock if the stock level is equal or below the threshold specified in the admin panel. The threshold can be set in **Only X left Threshold** field in *System > Configuration > Inventory*.

For example, if you set the option to 20, all products with quantity equal or less than 20 will have the text Only X left on the product page.

For **configurable products** this text is clickable and shows drop-down box with quantities of all products associated with that product.

4.7. Attributes

An attribute in Magento is defined as any property of a product, such as color, price, SKU, manufacturer etc. There are two types of attributes: System Attributes (cannot be deleted and every product must contain them) and Simple Attributes (which can be created by the store admin). Attributes are grouped in Attribute Sets.

Here you can find more info about Magento attributes:

http://www.magentocommerce.com/wiki/welcome_to_the_magento_users_guide/chapter_3#attributes

4.7.1. Attribute management

To edit existing attributes, go to *Catalog > Attributes > Manage Attributes* and select an attribute from the list. To create a new attribute, click **Add New Attribute** button. There are many types of attributes which you can create, one of the most useful is a **dropdown** attribute which lets you define a list of values that will be available when creating new products.

Important:

*After making any changes in the attributes and Attribute Sets, you may need to reindex the data in your Magento (**4.2 Index management**) and flush the cache (**4.1 Caching system**).*

Let's see an example of a **dropdown** attribute *manufacturer* which stores a list of product brands. Fill in the form as follows:

Attribute Information

- Properties
- Manage Label / Options

New Product Attribute

Attribute Properties

Attribute Code *	manufacturer
▲ For internal use. Must be unique with no spaces. Maximum length of attribute code must be less than 30 symbols	
Scope	Global
▲ Declare attribute value saving scope	
Catalog Input Type for Store Owner	Dropdown
Unique Value	No
▲ Not shared with other products	
Values Required	No
Input Validation for Store Owner	None
Apply To *	All Product Types
Use To Create Configurable Product	Yes

Frontend Properties

Use in Quick Search	Yes
Use in Advanced Search	Yes
Comparable on Front-end	Yes
Use in Layered Navigation	Filterable (with results)
▲ Can be used only with catalog input type Dropdown, Multiple Select and Price	
Use in Search Results Layered Navigation	Yes
▲ Can be used only with catalog input type Dropdown, Multiple Select and Price	
Use for Promo Rule Conditions	No
Position	0
▲ Position of attribute in layered navigation block	
Allow HTML Tags on Frontend	No
Visible on Product View Page on Front-end	No
Used in Product Listing	No
▲ Depends on design theme	
Used for Sorting in Product Listing	No
▲ Depends on design theme	

Attribute Information

[Properties](#) [Manage Label / Options](#)

Edit Product Attribute "Manufacturer" [Back](#) [Reset](#) [Delete Attribute](#) [Save Attribute](#) [Save and Continue Edit](#)

If you do not specify an option value for a specific store view then the default (Admin) value will be used.

Manage Titles (Size, Color, etc.)				
Admin	English	French	German	
Manufacturer		Fabricant	Hersteller	

Manage Options (values of your attribute)					
Admin	English	French	German	Position	Is Default
Acer				0	<input type="radio"/>
AMD				0	<input type="radio"/>
Anashria				0	<input type="radio"/>
Apple				0	<input type="radio"/>
Argus				0	<input type="radio"/>
Asics				0	<input type="radio"/>
Canon				0	<input type="radio"/>
Crucial				10	<input type="radio"/>
New Brand				20	<input type="radio"/>

[Add Option](#) [Delete](#)

After you create the attribute, you need to add it to the Attribute Set which you use for your products. Attribute Sets are described in the next chapter.

4.7.2. Attribute sets

An Attribute Set is a collection of attributes, created to fit certain types of products. To add a new product in Magento you need to select an Attribute Set which will describe that product. You can create many custom Attribute Sets for different types of products. For example, if you sell t-shirts and books, you could create 2 Attribute Sets: one specific to t-shirts, one specific to books. The Attribute Set for t-shirts can include attributes such as color and size (which are not needed in the Attribute Set for books).

Important:

*After making any changes in the attributes and Attribute Sets, you may need to reindex the data in your Magento (**4.2 Index management**) and flush the cache (**4.1 Caching system**).*

Let's continue an example with manufacturer attribute. To add your attribute to an Attribute Set, go to *Catalog > Attributes > Manage Attribute Sets*, select an Attribute Set (default one is named Default). You will see **Unassigned Attributes** section with a list of available attributes. You can associate attributes to your Attribute Set by clicking and dragging an attribute into the **Groups** section. To disassociate an attribute, simply drag it back to the **Unassigned Attributes** list.

Click **Save Attribute Set** button after you finish. You can add your custom attributes to many Attribute Sets.

Then, go to **Catalog > Manage Products** and open a product. If the product is based on the Attribute Set which contain your manufacturer attribute, you will see a list of manufacturers which may look like this:

The screenshot shows the 'Sample Product (Clothes)' edit screen in the Magento Admin. On the left, a sidebar lists various product-related tabs: General, Prices, Clothes, Meta Information, Images, Recurring Profile, Design, Gift Options, Inventory, Websites, Categories, Related Products, Up-sells, Cross-sells, Product Alerts, Product Reviews, Product Tags, Customers Tagged Product, and Custom Options. The 'General' tab is selected. On the right, the 'General' tab content is displayed. It includes fields for Name (Sample Product), SKU (top2), Weight (1.0000), and Status (Enabled). The URL Key field contains 'top2' with a checked checkbox for 'Create Permanent Redirect for old URL'. The Visibility field is set to 'Catalog, Search'. The Country of Manufacture is listed as 'Australia'. The Manufacturer field has a dropdown menu open, showing options like Brandissimi Company, DummyBrand (which is highlighted in blue), Manufacturer, Publisher, SampleLogo, WorldCorp, Samsung, and Apple.

If you added manufacturer attribute to that **Attribute Set**, but you don't see the field with the list of manufacturers, you may need to reindex the data in your Magento and flush the cache.

4.8. Content Management System (CMS)

4.8.1. WYSIWYG editor

WYSIWYG (*What You See Is What You Get*) editor is a convenient way to add content to pages and static blocks in Magento.

Important:

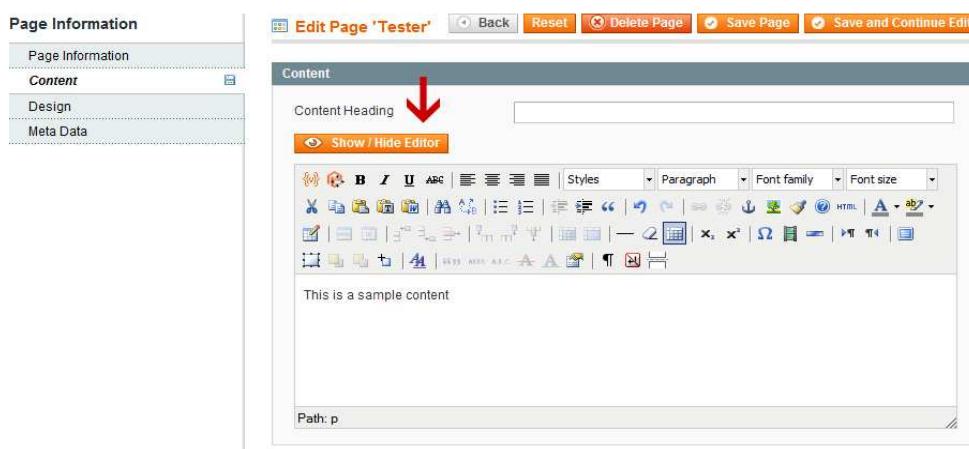

WYSIWYG should only be used to edit text, never use it to edit HTML. Remember to always turn off WYSIWYG editor when you want to edit HTML or Magento's CMS tags in the page/block content. Otherwise WYSIWYG editor can break your content.

In fact the best way to use WYSIWYG is to **turn it on only when it is needed**.

Go to

System > Configuration > Content Management and set it as **Disabled by Default**.

After that, if needed, WYSIWYG can always be turned on with **Show/Hide Editor** button above the page/block content field:

4.8.2. Static blocks

Static blocks in Magento are simple portions of content that can be displayed throughout the site. To manage static blocks, go to *CMS > Static Blocks* section in the admin panel.

To create a static block, go to *CMS > Static Blocks*, click **Add New Block** button and follow these steps:

1. In **Identifier** field enter an identifier of one of the static blocks. Make sure the identifier is lower-case and separated by underscores to follow Magento's standards.
2. Enter the title in **Block Title**
3. Select the **Store View** to which this block will apply.
4. Select **Enabled** in the Status field. Disabled means that the block is not displayed in the frontend.
5. Insert your **Content** (it can be text or HTML) and click

Save Block. Here's an example:

Below the content area are buttons for 'Show / Hide Editor', 'Insert Widget...', 'Insert Image...', and 'Insert Variable...'."/>

New Block

General Information

Block Title * Sample title

Identifier * block_header_top_links

Store View * All Store Views

```
<ul>
<li><a href="page1">Sample</a></li>
<li><a href="page2">Header</a></li>
<li><a href="page3">Links</a></li>
</ul>
```

For more details on creating static blocks please refer to Magento user guide: [static blocks](#).

4.8.3. CMS markup tags

There are some special markup tags – a bits of text surrounded by double curly braces – which have a special meaning in Magento. You can use those tags either in static blocks or CMS pages.

For example, this tag:

```
{{store url=""}}
```

will be replaced with the store's base URL.

It might be useful when you want to display a link on one of your pages. You can use this tag to dynamically build all of your links (you don't need to hard-code any links). Thanks to that you will not need to rebuild your links after you move your store to a new domain.

For example, if your store domain is www.example.com, the following tag placed in the page content:

`{{store url='path/to/page/about-us'}}`

will be replaced with this URL:

<http://www.example.com/path/to/page/about-us/>

For more information, please refer to this article, where you can find a comprehensive list of available tags: [CMS markup tags](#)

4.9. Translation / Localization

4.9.1. Interface translation

This theme introduces a few additional interface character strings.

For example “Special Price” label is replaced with shorter “Now only” label. Strings are located in `app/design/frontend/default/ma_carstore/locale/en_US/translate.csv`. This file can be used to translate the interface into other languages.

Example:

To translate the interface into Spanish follow these instructions:

- Create a new folder for your translation. For Spanish language it will be `app/design/frontend/default/ma_carstore/locale/es_ES`.
 - Copy `translate.csv` from `app/design/frontend/default/ma_carstore/locale/en_ES`.
- And paste it into created folder `app/design/frontend/default/ma_carstore/locale/es_ES`.
- Open `app/design/frontend/default/ma_carstore/locale/es_ES/translate.csv` in OpenOffice Calc (or other text editor like Notepad++, PSPad).

Note:

The editor should be capable to save file in UTF-8 encoding. Do not use Excel, it can break file structure. Read more about useful tools:

http://www.magentocommerce.com/wiki/groups/166/useful_tools_to_work_with_translations

- If you open **translate.csv** in OpenOffice Calc it might look like this:

Special Price:	Now only:
My Wishlist	Wishlist
My Wishlist (%d item)	Wishlist (%d)
My Wishlist (%d items)	Wishlist (%d)

My Account	Account
...	

The first column contains the original character strings. It should be **left intact**. In the second column you can place your translation of each string.

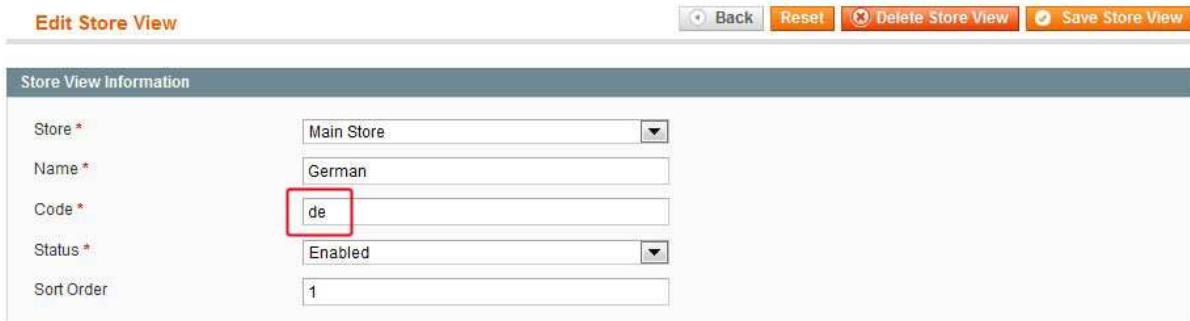

- Some strings contains % d or %s entries. These entries should be **left intact** in the translated strings.

4.9.2. *Language flag*

If you have more than one store view in your store, the store view switcher will be displayed at the top of the page. You can enable different language for each store view.

For each available language a flag is displayed in the store view switcher (we can also call it “language switcher”). Flag images (16x12 pixels, PNG format) should be uploaded to skin/frontend/ultimo/default/images/flagsfolder. Image names should be the same as the store view codes. E.g. if you have a store view with the code de, you will need to upload a flag image de.png to **skin/frontend/default/ma_carstore/images/flag_icon**

To check what is the store view code, go to *System > Manage Stores* and click on the store view name. You can find the code in the **Code** field:

The screenshot shows the 'Edit Store View' interface. At the top, there are buttons for Back, Reset, Delete Store View, and Save Store View. Below this is a section titled 'Store View Information' with the following fields:

- Store *: Main Store
- Name *: German
- Code *: de (highlighted with a red box)
- Status *: Enabled
- Sort Order: 1

Remember that if you change the store view code, you will also need to change the name of the corresponding flag image.

5. Magento theme customization

Please note that Magento theme customization is far beyond the scope of this user guide. This chapter is only for informational purposes, you should treat it as a starting point. Before you start to customize the theme you need to be sure that you know what you're doing.

Magento is based on a theming concept referred to as parent/child theming – changes in the theme can be implemented without modifying the original. Magento's “base” theme serves as a parent theme for any custom theme.

The correct way to customize the theme in Magento is to create your own sub-theme of the default theme in the design package. **You should never edit original design package files.** Files that need to be changed can be copied from the default theme of the design package to your custom sub-theme inside that package.

This way you can override any file of the design package. And you can be sure that when something goes wrong you can simply delete your custom sub-theme without breaking the original files.

5.1. Design packages

Themes in Magento are grouped together into design packages (in earlier versions called interfaces). By default Magento Community Edition has two packages named "base" and "default".

Note:

Do not edit files in the "base" package and do not create custom sub-themes inside the "base" package.

Every design package in Magento comes with a default theme named "default" which is the main theme in the design package. When administrator assigns a package to the store, Magento automatically looks for the theme named "default" in that package.

Design package can also contain variations of the "default" theme. These variations are

often called sub-themes because they inherit all the files from the "default" theme (from the same package) and from the "base" package. Inside the sub-theme you can override any file of the "default" theme. Sub-theme can even consist of a single file – other files will be inherited from the "default" theme from the package. This is called a **fallback mechanism** because Magento always falls back to the next theme in the hierarchy to find the requested file. Fallback is described later in this chapter.

5.2. Theme structure

Magento themes consist of many files like HTML templates, CSS stylesheets, images etc. All files are split between two directories:

- **app/design/frontend/default/theme_name/**
Templates directory – contains the layout files, HTML templates and translations
- **skin/frontend/default/ theme_name/**
Skin directory – contains CSS stylesheets, images and theme-specific JavaScript files

where **theme_name** indicates the theme name.

Template files are organized as follows:

- layout – directory contains XML files which define page structure
- template – directory contains template files (.phtml), a mix of HTML and PHP
- locale – directory contains CSV files with translation strings

Skin files are organized as follows:

- css – directory contains CSS files
- images – directory contains images
- js – directory contains theme-specific JavaScript files

5.3. Fallback mechanism

Understanding fallback mechanism is very important when you want to customize the theme, so let's see a simple example.

Let's say we have a design package named "helloworld" with custom sub-theme named "new". Package files are organized as follows:

- *app/design/frontend/helloworld/new/*
- *skin/frontend/helloworld/new/*

Let's also assume that your custom sub-theme contains a CSS file called "menu.css" located in **skin/frontend/helloworld/new/css/menu.css**

If your custom theme requests "menu.css" but Magento can't find it in your custom sub-theme in *skin/frontend/helloworld/new/css/menu.css*, Magento will try to find that file in the next theme in the hierarchy. Next theme in the hierarchy is the "default" theme in "helloworld" package so Magento will search in **skin/frontend/helloworld/default/css/menu.css**.

If the file is not there, Magento will continue until it locates the file. Next theme in the hierarchy is the "default" theme in "base" package:

skin/frontend/base/default/css/menu.css. The "default" theme in the "base" package is the **final fallback point** in the hierarchy.

Let's take a look again at the entire fallback hierarchy:

1. Look for the requested file in custom sub-theme:

skin/frontend/helloworld/new/

2. If not found, look for the file in the "default" theme in the design package:

skin/frontend/helloworld/default/

3. If not found, look for the file in the "default" theme in "base" design package:

skin/frontend/base/default/

The first theme in hierarchy is the theme that you assign through the admin panel (in **System > Configuration > Design**). The last theme in hierarchy is the "default" theme in "base" design package.

Thanks to the fallback mechanism there is no need to copy all the default theme files to your custom sub-theme when you want to make some changes in your theme. You only copy over the files that you want to edit. Other files will be inherited from the "default" theme in the package and from the "base" package.

The most important advantages of the fallback mechanism:

- Selected functionality can be shared between many themes
- Less code to maintain
- Custom themes are update-proof: you don't edit original files, so your changes are not overwritten after theme updated

5.4. Summary

Themes in Magento are grouped together into design packages.

- By default Magento comes with the package named "base" which contains all the files that control Magento's default behavior.
- Every design package in Magento comes with a default theme named

"default" which is the main theme of the design package.

- Design package can contain variations (sub-themes) of the "default" theme. They inherit all the files from the "default" theme (from the same package) and from the "base" package.
- The correct way to customize the theme in Magento is to create your own sub-theme. You should **never edit original design package files**. Files that need to be changed can be copied to your custom sub-theme.
- This way you can override any file of any design package. And you can be sure that when something goes wrong you can simply delete your custom sub-theme without breaking the original files.
- Magento use fallback mechanism to make custom themes easier to maintain and upgrade-proof.
- The first theme in the fallback hierarchy is the theme that you assign through the admin panel (in *System > Configuration > Design*). The last theme in hierarchy is the "default" theme in "base" design package.
- If the requested file is not found in your custom sub-theme, Magento will try to find that file in the "default" theme from the package. If the file is not found, Magento will call the file from the "base" package.
- The directory structure inside the sub-theme must replicate the directory structure of the default theme.

II. Theme features and elements

In this chapter you can find description and configuration details of selected elements of this theme, such as home page, built-in static blocks, CSS classes etc.

Note:

*This list of all settings available in the **System > Configuration** section of the admin panel can be found in the next chapters.*

1. Ma_carstore template

1.1. Home page

1.1.1. Structure

This template has 3 main components : header, main and footer. You can see as the below image:

HEADER

The screenshot displays a responsive e-commerce website template for a car store. The header features a logo with a steering wheel, a slogan placeholder, and navigation links for Home, Mercedes, Hyundai, Toyota, Chevrolet, Audi, BMW, and Lexus. A search bar and a shopping cart icon (0 items) are also present. The main content area includes a vertical menu, a poll about favorite colors, popular tags, and a featured collection for wheels. The central banner promotes "EXCLUSIVE COLLECTIONS WHEELS". Below it, a "Featured products slider" shows items like a headlight, alternator, and tire. A "New products" section follows, featuring wheels and headlights. The right sidebar contains a "My Cart" section (empty), a "Compare Products" section (empty), and a "Bestseller Product Vertical Scroller" displaying placeholder products. The footer provides links for latest news, shipping info, support center, payment methods, and newsletter sign-up.

Header: Default welcome msg!

After the theme is installed, you can import sample versions of the home page.

To manage pages in Magento, go to **CMS > Pages** section. By default in Magento a page with URL Key *home* is displayed as the store's home page. One of a few sample home pages which you can import, has the following URL key: *carstore-home-page*. So to display that page as a home page in your store, you need to change its URL key to simple *home*.

Note:

If the page with that URL key already exists(which is true in most of Magento installations) you will need to delete existing page or change its url key.

Alternatively you can indicate which CMS page you want to use as your home page. To do that, go to **System > Configuration > General > Web > Default Pages** tab and select the desired page in the **CMS Home Page** field.

1.1.2. Menu

1.1.3. Home page layout

For every CMS page in Magento you can select page layout - the number of columns: one, two, or three columns. To change the layout of the home page, go to **CMS > Pages**, select the page, select one of the options in the **Layout** field and click **Save Page** button:

1.1.4. Home page content

To edit the content of the home page, go to **CMS > Pages** and open the active home page. Content can be found in the main field of the **Content** tab:

The screenshot shows the 'Edit Page 'Home page'' interface in the Magento Admin. On the left, there is a sidebar with tabs: 'Page Information', 'Content' (which is selected and highlighted in blue), 'Design', and 'Meta Data'. The main content area is titled 'Content'. It contains a 'Content Heading' input field and a large text area with the placeholder text 'Put your custom content here...'. At the top of the main area, there are several buttons: 'Edit Page 'Home page'', 'Back', 'Reset', 'Delete Page', 'Save Page' (with a checked checkbox), and 'Save and Continue Edit' (with a checked checkbox). The 'Save Page' and 'Save and Continue Edit' buttons are orange, while the others are grey.

Important

Always turn off WYSIWYG editor when you want to edit HTML or Magento's CMS tags in the page/block content. Otherwise WYSIWYG editor will break the content. Refer to 4.8.1 WYSIWYG editor for more details.

1.2. Products grid page and products grid page

1.3. Product view

The screenshot shows a product page for a car part. At the top, there's a navigation bar with links for HOME, MERCEDES, HYUNDAI, TOYOTA, CHERVOLET, AUDI, BMW, and LEXUS. The main content area features a large image of a car headlight, with smaller images below it labeled 'MORE VIEWS'. To the right of the image, there are sections for 'Email to a Friend', 'Be the first to review this product', and 'Availability: In stock'. The price is listed as '\$399.00'. Below the price, there are dropdown menus for 'Color' and 'Size', both with the placeholder 'Please Select...'. A 'Quick Overview' section contains a short paragraph of placeholder text. At the bottom of the main content area, there are buttons for 'ADD TO CART' and 'ADD TO WISHLIST'. The footer of the page includes sections for 'LATEST NEWS', 'SHIPPING INFO', 'SUPPORT CENTER', and 'WE ARE ACCEPT', along with a 'NEWSLETTER' sign-up form.

III. Extensions

1. Banner7

➤ Configuration

- Login your Magento Admin area
- Navigate to **Magentothem > Banner7 > Configuration** and configure default criteria as per screenshot below:

Banner7 Config	
Enabled:	Yes
Animation Type:	random
Pause Time:	5000 Set the speed of the slideshow cycling, in milliseconds
Animation Speed:	600 Set the speed of animations, in milliseconds
Qty of items:	4 Number item display
Show Caption:	Yes
Show Next/Back control:	No
Show navigation control:	Yes

Below is parameters explanation:

- Enabled: Include yes/no module parameter
- Animation type: The effect to be used for transition between two slides.
- Pause Time: Time (in milliseconds) between slide transitions.
- Animation Speed: The speed of animations, in milliseconds
- Qty of items: Number item display
- Show Caption: Defines whether caption of images is displayed or not
- Show Next/Back control: Defines whether next/back button is displayed or not
- Show navigation control: Defines whether the navigation control is displayed or not

➤ Add item in slideshow(banner7)

- Navigate to **Magento > Banner7 > Manage Items**

Item Manager									
				Actions					
	ID	Title	Link	Description	Image	Store ID	Order	Status	Action
Any	3	vintage fashion fabric resour				0	0	Enabled	Edit

Order	<input type="text"/>														
Store View *	<input type="button" value="All Store Views"/> All Store Views														
Status	<input type="button" value="Enabled"/> Enabled														
Description															

- ✓ Title: Title of the item
- ✓ Link: URL of the item
- ✓ Image: Image of item
- ✓ Order : The order of the item
- ✓ Store View : Default choose “All Store Views”
- ✓ Status : Define whether display slide or not
- ✓ Description: Description about item

 Upload images of item : Click “Browse” button, you can choose image from your computer

- When finished, click “Save Item” button to save your item.
- Log out Magento Admin, then Reindex data
- You can repeat steps above to add other items for banner

2. Search by category

➤ Configuration

- a. Login your Magento Admin area
- b. Navigate to **Magentothem > Search By Category > Configuration** and configure default criteria as per screenshot below:

Settings	
Enable	<input type="text" value="Yes"/>
Select Category On Category Pages	<input type="text" value="Yes"/>
Show Subcategories	<input type="text" value="Yes"/>
Subcategory Level	<input type="text" value="4"/>
Subcategory Indentation	<input type="text" value="—"/>

Below is parameters explanation:

- **Enable:** Include yes/no module parameter
- **Select categories on category pages** (default ‘yes’): Indicates if the active category on a category page is automatically selected in the drop-down list.
- **Show subcategories** (default ‘yes’): Indicates whether subcategories should be displayed in the category drop-down list.
- **Subcategory level** (default ‘4’): Indicates the max level of subcategory to show in the category drop-down list.
- **Subcategory indentation** (default ‘—’): The indentation text that is shown in front of each subcategory in the category drop-down list.

➤ How to use

- By selecting a category, entering the search query, and pressing the search button (or enter), the search result page is shown for the search query where the results are filtered by the selected category. On this page and on category pages, the active category (filter or current category) is also selected in the drop-down list.

The screenshot shows a Magento search results page for the keyword 'sony'. A red callout box points to the search bar with the text 'Enter the keyword search.' Another red callout box points to the category dropdown menu with the text 'Select category to search in.'. A third red callout box points to the right side of the page with the text 'Search result here.' The search results grid displays two items: 'Sony Ericsson W810i' and 'Sony VAIO 11.1" Notebook PC'.

Product	Rating	Price	Action Buttons
Sony Ericsson W810i	★★★☆☆	\$399.99	Add to Cart, Add to Wishlist, Add to Compare
Sony VAIO 11.1" Notebook PC		As low as: \$2,699.99	Add to Cart, Add to Wishlist, Add to Compare

3. New Products Slider

➤ Configuration

- Login your Magento Admin area
- Navigate to **Magentothem > New Products Slider > Configuration** and configure default criteria as per screenshort below:

New Product Slider

New Product Slider Config

scroller.

- Number Product Show: Number product will be displayed in a row
- Width of Thumbnail: The width of thumbnail image will be displayed.
- Height of Thumbnail: The height of thumbnail image will be displayed
- Show Next/Back control: Defines whether the next/back control is displayed or not
- Show navigation control: Defines whether the navigation control button is displayed or not

➤ How to use

- Go to **Catalog > Manage Products**
- Select any product
- Select tab **Up-sells**. Then select “**Any**” like image below:

The screenshot shows the Magento Admin Panel interface. The top navigation bar includes links for Dashboard, Sales, Catalog (which is highlighted in orange), Mobile, Customers, Promotions, Newsletter, CMS, Reports, Magentothem, System, and Help. A global search bar and user information are also present. A message at the top states: "Latest Message: Reminder: Change Magento's default phone numbers and callouts before site launch". Below this, a notification bar indicates "You have 1 critical, 4 major, 19 minor and 65 notice unread message(s). [Go to notifications](#)".

The main content area displays a grid of products under the heading "Quisque in arcu (Default)". The grid has columns for ID, Name, Type, Attrb. Set Name, Status, Visibility, SKU, Price, and Position. The "Up-sells" column contains dropdown menus. One dropdown for product ID 12 has "Any" selected, while others show specific product names. The "Position" column shows values like 0_0, 0_0, 0_0, and 0_0.

ID	Name	Type	Attrb. Set Name	Status	Visibility	SKU	Price	Position
12	Accumsan elit	Simple Product	Default	Enabled	Catalog, Search	012	\$80.00	0_0
11	Prism in faucibus	Simple Product	Default	Enabled	Catalog, Search	011	\$80.00	0_0
8	Etiam gravida	Simple Product	Default	Enabled	Catalog, Search	008	\$100.00	0_0
7	Pellentesque habitant	Simple Product	Default	Enabled	Catalog, Search	007	\$100.00	0_0

- Click **Search** button. We get the following picture:

The screenshot shows the Magento Admin Product grid. At the top, there are buttons for Back, Reset, Delete, Duplicate, Save, and Save and Continue Edit. Below the buttons, there are filters for Product ID, Name, Type, Attribute Set Name, Status, Visibility, SKU, Price, and Position. The main grid displays 11 records found across 1 page, with 20 items per page. The columns include ID, Name, Type, Attrb. Set Name, Status, Visibility, SKU, Price, and Position. Each row contains a checkbox, the product ID, name, type, attribute set name, status, visibility, SKU, price, and position. Some rows have checkboxes checked, indicating selected products.

- Select upsell products like the image above
- Click **Save** or **Save and Continue Edit**
- You can repeat steps above to configure new attribute for other products

12.Related Slider

➤ Configuration

- Login Magento Admin area
- Navigate to **Magentothem > Related Slider > Configuration** and configure default criteria as per screenshot below:

Related Slider Config	
Enabled:	<input type="text" value="Yes"/> [STORE VIEW]
Auto slide:	<input type="text" value="No"/> [STORE VIEW]
Slideshow Speed:	<input type="text" value="3000"/> [STORE VIEW]
Animation Speed:	<input type="text" value="600"/> [STORE VIEW]
Show Price:	<input type="text" value="Yes"/> [STORE VIEW]
Show Wishlist:	<input type="text" value="No"/> [STORE VIEW]
Number Product Show:	<input type="text" value="4"/> [STORE VIEW]
Width of Item:	<input type="text" value="300"/> [STORE VIEW]
Width of Thumbnail:	<input type="text" value="300"/> [STORE VIEW]
Height of Thumbnail:	<input type="text" value="300"/> [STORE VIEW]
Show Next/Back control:	<input type="text" value="Yes"/> [STORE VIEW]
Show navigation control:	<input type="text" value="No"/> [STORE VIEW]

Below is explanation:

- Enabled: Include yes/no module parameter
- Auto slide: Defines whether images autoplay or not
- Slideshow Speed: Duration (in milliseconds) of slide transition animation. Defines how fast the current slide is replaced with the next slide.
- Animation Speed: The speed of animations, in milliseconds
- Show Price: Defines whether price of product is displayed or not
- Show Wishlist: Defines whether the wishlist is displayed or not
- Number Product Show: Number product will be display in a row
- Width of item: The width of the item.
- Width of Thumbnail: Width of thumbnail image will be displayed.
- Height of Thumbnail: Height of thumbnail image will be displayed
- Show Next/Back control: Defines whether next/back control is displayed or not
- Show navigation control: Defines whether navigation button is displayed or not

➤ How to use:

- Go to **Catalog > Manage Products**
- Select any product
- Select Related Products

- Select “Any” like the image below:

- Click **Search** button. And we get the image above
- Select related products like the image above
- Click **Save or Save and Continue Edit**
- You can repeat steps above to configure new attribute for other products

13.Brand slider

➤ Configuration

- Login Magento Admin area
- Navigate to Magentothem > Brandslider > Configuration and configure default criteria as per screenshort below:

Brand Slider Config	
Enabled:	No
Auto slide:	Yes
Slideshow Speed:	4000
Animation Speed:	600
Show Short Description:	No
Qty of Items:	9
Number Items Show:	4
Width of Item:	200
Show Next/Back control:	Yes
Show navigation control:	No

Below is explanation:

- Enabled : Include yes/no module parameter
- Auto slide: Defines whether images autoplay or not
- Slideshows Speed:Duration (in milliseconds) of slide transition animation. Defines how fast the current slide is replaced with the next slide.
- Animation Speed: The speed of animations, in milliseconds
- Show Short Description: Defines whether display short description or not

- Color Scheme:
- Show Faces: Show profile photo in the plugin
- Show header: Show the Find Us on facebook bar at top. Only shown when either stream or connections are present.

15.Quick view

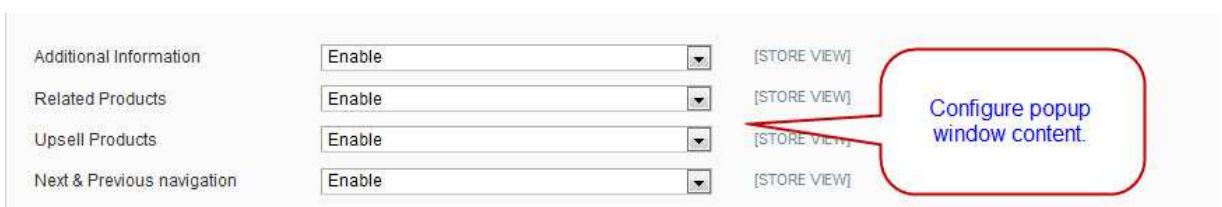

➤ Configuration

Log in to the admin panel, and we will show you how to configure the extension step by step.

- To enable the extension, go to System -> Configuration -> Quickview -> Setting on your Dashboard

- Also in Settings tab you can configure next four fields. Here you can configure popup window content. Set if you want Additional Information, Related Products, Upsell Products, Next & Previous navigation to be displayed.

- The next tab is “Media”. This is where you configure the image zoom performance within the popup window. Leave the “Default” box checked if you want to have the standard Magento image zoom. Same for enabling any customized tool of yours. Check either “Cloud-zoom” or “Fancybox” fields if you want the correspondent modules to operate. They are already implemented. To set them up or find out more about their functionality, follow the “View Demo and Info” links.

➤ How to use

It's time to get acquainted with Quick View features and the ways customers take benefit of them.

17. Custommenu

➤ Configuration

- Log in to the admin panel, and we will show you how to configure the extension step by step.
- To enable the extension, go to System -> Configuration -> Custom Menu -> General on your Dashboard.

Custom Menu

General

Enable Enable the extension

In order to display a custom block with images or other html content in the popup, use the Static Block (CMS->Static Blocks section) with the ID like "pt_menu_idcat_10", where "10" is the Category ID of this category

Also in General tab you can configure next three fields.

The screenshot shows the 'General' configuration section for a menu item. On the left is a sidebar with 'Manage Stores' at the top, followed by sections for Configuration, General, Catalog, and Magentothem. Under Configuration, there are links for General, Web, Design, Currency Setup, Store Email Addresses, Contacts, Reports, Content Management, Catalog, Google Sitemap, RSS Feeds, Email to a Friend, and Custom Menu.

General

Enable: Yes [STORE VIEW]

In order to display a custom block with images or other html content in the popup, use the Static Block (CMS->Static Blocks section) with the ID like "pt_menu_idcat_10", where "10" is the Category ID of this category.

Show homepage: Yes [STORE VIEW]

Show homepage in menu

Visible menu depth: 4 [STORE VIEW]

e.g. 1, 2, 3, 4 (0 - disable limits). For example, if you set this value to 2, only second level categories will be displayed.

Categories:

Furniture
Cameras (highlighted)
Electronics
Computers
Mens
Womens
Apparel
Hoodies
Living Room (highlighted)
Bedroom

All of the selected categories will be shown without link

Empty for all categories.

Show Home menu item or not

Enter level categories will be displayed

- After that you can customize number of columns.

The sidebar on the left includes sections for MAGENTO THEMES, CUSTOMERS, and Persistent Shopping Cart.

Columns

Number of columns: 4 [Enter maximum number of columns]

e.g. 1, 2, 3. The maximum number of columns for the popup.

Merge small subcategories: Yes [Merge small subcategory lists into one column]

Merge small subcategory lists in the extreme left categories.

Popup settings

Width	0 ▲ in pixels, (0 - no fixed width)	[STORE VIEW]
Popup Effect	SlideDown ▲ Choose effect to show popup	[STORE VIEW]
Top offset	30 ▲ in pixels	[STORE VIEW]
Right offset (minimum)	48 ▲ in pixels	[STORE VIEW]

Select the effect that you want the popup to display

- Add CMS Block to popup of a specify category.
 - ✓ In order to display a custom block with images or other html content in the popup, use the **Static Block (CMS->Static Blocks** section) with the ID like "**pt_menu_idcat_10**", where "**10**" is the Category ID of this category.
 - ✓ Default the custom block will be show at the bottom of the popup. But if you want to show it on the right of the popup, just use the ID like "**pt_menu_idcat_10_right**".

The block has been saved.

Static Blocks

Page: 1 of 1 pages | View: 20 per page | Total 8 records found

Title	Identifier	Store View	Status
Celphones Landing	cellphones-landing	All Store Views	
Electronics Landing	electronics-landing	All Store Views	
Footer Links	footer_links	All Store Views	
Test menu block 1	pt_item_menu	All Store Views	
Test menu block 2	pt_item_menu_second	All Store Views	
Block in cat 10	pt_menu_idcat_10	All Store Views	
Test menu block 10 right	pt_menu_idcat_10_right	All Store Views	
Add Menu Links	pt_menu_links	All Store Views	

This static block will be shown at the bottom of popup in the category has ID is "10"

This static block will be shown on the right of popup in the category has ID is "10"

- Add CMS Block to menu item.
 - ✓ Just use the static block with the ID has prefix is "pt_item_menu".
 - ✓ Ex: pt_item_menu_first, pt_item_menu_second...

The screenshot shows the Magento Admin Panel's 'Static Blocks' section. The grid displays various static blocks with their titles, identifiers, store views, and statuses. A red callout highlights the 'pt_item_menu' and 'pt_item_menu_second' entries in the 'Identifier' column, which are identified as menu items.

Title	Identifier	Store View	Status
		All Store Views	
Cellphones Landing	cellphones-landing		
Electronics Landing	electronics-landing		
Footer Links	footer_links		
Test menu block 1	pt_item_menu		
Test menu block 2	pt_item_menu_second		
Block in cat 10	pt_menu_idcat_10	All Store Views	Disabled
Test menu block 10 right	pt_menu_idcat_10_right	All Store Views	Enabled
Add Menu Links	pt_menu_links	All Store Views	Enabled

- Add links to menu item.
 - ✓ In order to add links to menu item we use only static block with the ID is “pt_menu_links”.
 - ✓ The content of this static block like this:

```
<ul>
    <li><a href="{{store direct_url="about-magento-demo-store"}}">About Us</a></li>
    <li><a href="{{store direct_url="contacts"}}">Contact Us</a></li>
</ul>
```

The screenshot shows the Magento Admin Panel with the CMS module selected. The Static Blocks grid displays eight records. A callout bubble points to the 'pt_menu_links' row, which is highlighted with a green border.

Title	Identifier	Store View	Status
		All Store Views	
Cellphones Landing	cellphones-landing	All Store Views	Enabled
Electronics Landing	electronics-landing	All Store Views	Enabled
Footer Links	footer_links	All Store Views	Enabled
Test menu block 1	pt_item_menu	All Store Views	Enabled
Test menu block 2	pt_item_menu_second	All Store Views	Enabled

19. Vertical Menu

➤ Configuration

- Please make sure **VerticalMenu** module get installed properly
- Login your Magento Admin area
- Navigate to **Magentothem > VerticalMenu > Configuration** and configure default criteria as per screenshot below:

Vertical Menu

Vertical Menu Config	
Enabled Module:	<input type="checkbox"/> Yes [STORE VIEW]
Title:	MA Vertical Menu [STORE VIEW]
Enabled Left Menu :	<input type="checkbox"/> Yes, Dropdown [STORE VIEW]
Enabled Right Menu:	<input type="checkbox"/> Yes, Accordion [STORE VIEW]
Override Default Shop By:	<input type="checkbox"/> Yes [STORE VIEW]

Below is parameters explanation:

- **Enabled Module:** include yes/no module parameter

- **Title:** Title of module vertical menu
- **Enabled Left Menu:** Show menu in the left sidebar.
- **Enabled Right Menu:** Show menu in the right sidebar.
- **Override default shop by:** allow you choose collapse / Expand Shop by category.

➤ How to use

Default the vertical menu display in left sidebar or right sidebar.

If you want change position display module you go to

app/design/frontend/default/default/layout/verticalmenu.xml

Then change reference

```
<reference name="left">
  <block type="verticalmenu/verticalmenu" before="-"
name="ma.verticalmenuleft"
template="magentothem/verticalmenu/verticalmenuleft.phtml" />
</reference>
<reference name="right">
  <block type="verticalmenu/verticalmenu" before="-"
name="ma.verticalmenuright"
template="magentothem/verticalmenu/verticalmenuright.phtml" />
</reference>
```

To

```
<reference name="New position">
```

```

<block type="verticalmenu/verticalmenu" before="-"
name="ma.verticalmenuleft"
template="magentothem/verticalmenu/verticalmenuleft.phtml" />

</reference>

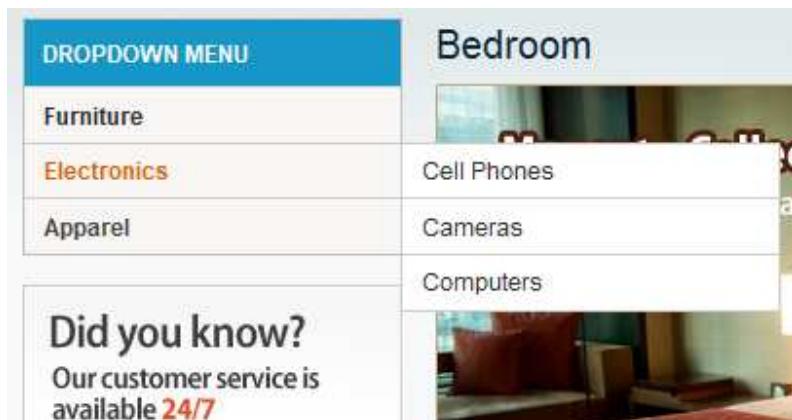

<reference name="New position ">
    <block type="verticalmenu/verticalmenu" before="-"
name="ma.verticalmenuright"
template="magentothem/verticalmenu/verticalmenuright.phtml" />

</reference>

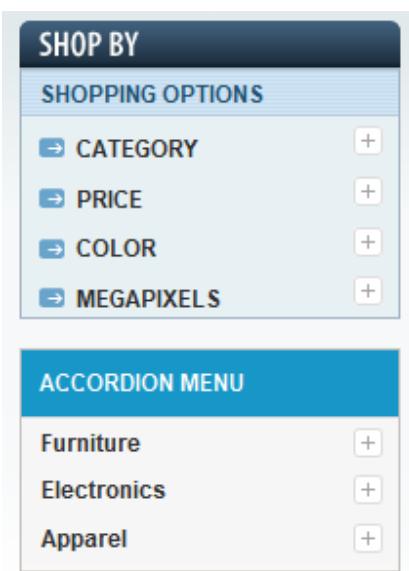

```

The extension will be displayed frontend:

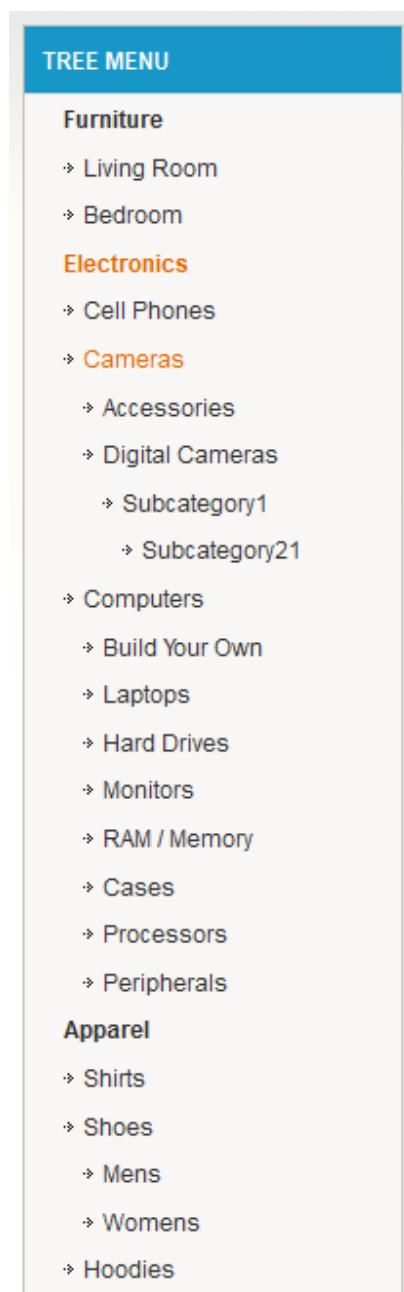

+ Dropdown menu

+ Accordion menu

+ Tree menu

20.Twitter

➤ Set up

Step 1 - Setup a Twitter Application

This process is straightforward and you should have a set of keys within a few minutes.

1. Visit <https://dev.twitter.com/apps/> and sign in using your Twitter username and password. This doesn't have to be the username or password of the stream you need access to, just a Twitter account you control.
2. Select "Create new application" and enter the application details.
 1. The name and description can be anything you like really, but you can't use "Twitter" in the name.
 2. The website field can be your main website and doesn't have to be the site where your Twitter feed or feeds are located.
3. Callback URL can be left blank
4. Enter the CAPTCHA info and click create
5. On the next details screen, click "create my access token". You may need to refresh the page after a few seconds if it doesn't appear automatically.
6. Make a note of the Consumer key, Consumer secret, Access token and Access token secret as highlighted below.

Organization

Information about the organization or company associated with your application. This information is optional.

Organization	None
Organization website	None

OAuth settings

Your application's OAuth settings. Keep the "Consumer secret" a secret. This key should never be human-readable in your application.

Access level	Read-only About the application permission model
Consumer key	AubOwFFQ9r35FIEZNTTrTsg
Consumer secret	Rfdmx8MYYILJvQ8tz7265MEs9sTLOoFKHnLfMjrpwpY
Request token URL	https://api.twitter.com/oauth/request_token
Authorize URL	https://api.twitter.com/oauth/authorize
Access token URL	https://api.twitter.com/oauth/access_token
Callback URL	None
Sign in with Twitter	No

Your access token

Use the access token string as your "oauth_token" and the access token secret as your "oauth_token_secret" to sign requests with your own Twitter account. Do not share your oauth_token_secret with anyone.

Access token	218191870-5PFDJbKKGRgnFfAwYKtYZZRrlzSDTLg1M2B6fyue
Access token secret	dOoHvGJR8LqBAxzVxa5RBGng1mVmSIpGEbVBt9uSw
Access level	Read-only

[Recreate my access token](#)

Step 2 - Authenticate the Twitter Feed

You go to your Website folder (www, public_html) -> "twitter" folder then open "get-tweets.php" file and change

```
$twitteruser = "twitter_username";
$consumerkey = "AubOwFFQ9r35FIEZNTTrTsg"
$consumersecret =

Show Add To Cart:	No	[STORE VIEW]
Show Add To Wishlist:	No	[STORE VIEW]
Show Add To Compare:	No	[STORE VIEW]
Show Short Description:	No	[STORE VIEW]
Short Description Max Length:		[STORE VIEW]
▲ Empty for display all short description.		
Qty Of Products:	9	[STORE VIEW]
Number Item Show:	3	[STORE VIEW]
Products Scroll:	3	[STORE VIEW]
Animation Duration:	1000	[STORE VIEW]
Width of Thumbnail:	80	[STORE VIEW]
Height of Thumbnail:	80	[STORE VIEW]

Below is parameters explanation:

- Enabled: Include yes/no module parameter
- Show Sidebar Left: Defines whether display sidebar on the left or not
- Show Sidebar Right: Defines whether display sidebar on the right or not
- Auto Scroller: Enable auto scroller product
- Width of Scroller: Width of panel slider will be displayed.
- Height of Scroller: Height of panel slider will be displayed.
- Show Price : Defines whether the Price is displayed or not
- Show Add to Cart: Defines whether the Add to Cart is displayed or not
- Show Add to Wishlist: Defines whether the Add to Wishlist is displayed or not
- Show Add to Compare: Defines whether the Add to Compare is displayed or not
- Show Short description: Defines whether the short description is

displayed or not

- Short description max length: Max length of short description is displayed.
- Qty of Products: Product quantity will be displayed on product scroller.
- Number Item Show: Number of product is displayed.
- Products Scroll: Product quantity will be scroller on product scroller.
- Animation Duration: Duration of transaction scroller.
- Width of Thumbnail: Width of thumbnail image will be displayed.
- Height of Thumbnail: Height of thumbnail image will be displayed.

IV. Trouble shooting

1. General issues

1.1. Some of the theme features don't work or give errors.

What can cause the problem:

- a) Magento cache (or external cache) was not flushed after installation of the theme.
- b) Compilation mode was not disabled before installation.
- c) Some of the theme files were not uploaded.
- d) File permissions issue.
- e) You have some third-party extensions which change/break theme's default behavior or cause some conflicts. Extensions such as Fooman Speedster can break the JavaScript files – refer to chapter for more details.
- f) You edited theme files and accidentally removed or changed something in the files.
- g) You have customized the theme by creating custom sub-theme and your modifications change/break the default behavior of the theme.
- h) You have some elements that left from your previous theme (e.g. in Magento's "base" theme in app/design/frontend/base/) and that changes/breaks the default behavior of the theme.

Also check your log files in var/log/(log settings should be enabled in **System > Config > Developer**) for more information about possible errors.

1.2. Blank page or 404 not found – when trying to open theme admin pages.

Log out from Magento admin panel, delete all files in var/cache/directory (to clear Magento cache), and log in again.

1.3. There is no theme admin tab in the admin panel, or I get a blank page, or Access Denied error.

Log out from Magento admin panel, delete all files in var/cache/ directory, clear web browser cache/cookies for your store domain and log in again.

1.4. Theme was installed but Magento doesn't see the theme files

This may be file permissions issue – your Magento doesn't have access to the theme files because of incorrect file permissions on your server. You need to set correct file permissions for all theme files (the same permissions as for other Magento files).

1.5. "Package with this name does not exist" message when trying to enable the theme.

This message means that:

- a) theme files were not uploaded,
- b) or they are not in the correct place,
- c) or there is file permissions issue

1.6. Tabs, sliders or other interactive elements don't work

This may be caused by jQuery conflict: one of your custom extensions is loading another version of jQuery. You need to remove that version of jQuery or remove that extension.

1.7. After theme installation the store gives blank page or an error.

Log out from Magento admin panel. Change the owner of the uploaded files to the web server user and set 775 permissions for them. Delete all files in **var/cache/directory** and try again.

1.8. Images (e.g. in the slideshow) are not displayed.

First, check if images were uploaded and if correct paths to those files are specified. This may be file permissions issue – your Magento doesn't have access to images because of incorrect file permissions

on your server. You need to set correct file permissions for all images and folders (in most cases images are stored in media directory).

Note:

In fresh Magento installation, the default sample home page tries to load sample images which doesn't exist in this theme (so you will see blank rectangles instead of images). Go to CMS > Pages > Home page, remove the sample content and replace it with your own content.

1.9. Sliders: previous/next buttons don't work in some browsers.

You may also want to reinstall your web browser and remove all plugins to check if some of them can cause conflicts.

1.10. Slideshow is not displayed on the home page.

Make sure the configuration of the slideshow is correct. Enable all the static blocks which are used as slides in the slideshow. Finally, flush the cache.

If this doesn't help:

- Non-standard value in **System > Configuration > Web > Default Pages > Default Web URL**. Set the default value: cms
- Some custom extensions change the default behavior of Magento's home page, so the slideshow module is not able to load on the home page anymore. How to recognize that case: open the source code of the home page in your web browser.

2. Configuration

Theme configuration changes do not appear on the frontend

Flush Magento cache in **System > Cache Management**, clear web browser cache/cookies for your store domain and refresh the page in your web browser

3. Third-party extensions

3.1. One of my extensions doesn't work with this theme.

This theme may not be compatible with some third-party extensions. It's impossible for theme author to make the theme compatible by default with all existing extensions because there are thousands of available Magento extensions.

Generally all extensions can work with all themes but sometimes they have to be integrated manually. That's because sometimes the extension and the theme override the same Magento template file so there can be a conflict.

3.2. One of the features stopped working after third-party extension was installed.

There can be a conflict, if the extension and the theme override the same Magento template file. You should contact author of the extension for more information. Also, check your log files in var/log/ (log settings should be enabled in *System > Config > Developer*) for more information about the error.
